## SKILLS

---

- **Programming Languages:** C#, JavaScript & TypeScript
- **Frameworks/Platforms:** .NET Core/MVC, ReactJs, NextJs, Redux, Tailwind CSS, MUI UI, Redis, RabbitMQ
- **Databases:** SQL Server, PostgreSQL
- **Tools & Processes:** Git, CI/CD, Docker

## EXPERIENCES

---

**FMS — Fullstack developer** | C#, NextJs (Freelance, 12 members)

January 2022 — Now

**Project:** FMS Projects

- **Description:** A management system including CRM and CMS with e-commerce, sales management, inventory, shipping, authorization, reporting... for web and mobile platforms.
- **Technologies used:** C#, .Net Core, PostgreSQL, ReactTS, Redis, RabbitMQ, Docker
- **Responsibilities:**
  - Developed a comprehensive management system including CRM and CMS for web and mobile platforms.
  - Implemented a KYC system using gRPC and designed the Audit Worker module with Markdown and RabbitMQ.
  - Built and optimized the Report module, including website and APIs, based on Business Analyst requirements.
  - Maintain, troubleshoot, and enhance the website and APIs according to tester reports.
  - Maintained and enhanced the system, applying microservices architecture and Domain-Driven Design (DDD).

**CONG TY CO PHAN VIETINFO — Fullstack developer** | C#, ReactJS

June 2022 — Now

**Project:** Internal Chat Project (4 members)

- **Description:** A web application that enables departments to communicate, manage, and assign tasks. It supports over 200 concurrent users and integrates with APIs of other company products.
- **Technologies used:** C#, .Net Core, SQL Server, ReactTS, Material UI, Tailwind CSS
- **Responsibilities:**
  - Develop a web chat feature with responsive design, optimized for all devices.
  - Analyze requirements from the Project Manager (PM) to build and integrate APIs from other company products.
  - Ensure system stability to support over 200 concurrent users.

**Project:** QLVB Project (8 members)

- **Description:** A CMS website that provides robust features like version control, secure access management, and audit trails to streamline workflows for managing a wide array of documents—including digital signatures, invitations, administrative paperwork, and more—while ensuring compliance and data integrity.
- **Technologies used:** C#, .Net Core, SQL Server, ReactTS, Devextreme, Bootstrap
- **Responsibilities:**
  - Maintain and enhance the CMS website to ensure optimal performance and functionality.
  - Resolve issues related to document and user workflows for a seamless experience.
  - Collaborate with the back-end team to develop new features based on client requirements.
  - Discuss improvements with the team to optimize the platform's functionality and strengthen its security features.
  - Refactor code from ASP.NET Web Forms to ReactJS to modernize the CMS, improving performance and scalability.

**Project:** Pronest (6 members)

- **Description:** Developed an IoT device management system enabling viewing, updating, and automation of IoT devices.
- **Technologies used:** C#, .Net Core, SQL Server, Flutter
- **Responsibilities:**
  - Developed an intuitive user interface for monitoring and managing the status of IoT devices.
  - Integrated APIs for data collection and remote device control.
  - Built a mechanism for automatically updating and adjusting device configurations as required.
  - Ensured the security and stability of the system through regular testing and maintenance.

PROJECTS

---

**Project:** SEO Tool

- **Description:** A tool that helps users manage and optimize their website's SEO performance.
- **Technologies used:** C#, .Net Core, SQL Server, Blazor
- **Responsibilities:**
  - Built an SEO analysis tool using .NET Core and Blazor, integrating a Google Search crawler for keyword analysis.
  - Developed a rank tracking system to monitor post positions and indexing status.
  - Optimized performance using MemoryCache, reducing latency and providing instant keyword suggestions.
  - Extended the Blazor-based CMS with SEO analytics and automated reporting workflows.

**Project:** Minder

- **Description:** A sports coordination platform enabling users to organize matches, discover players/teams, and manage sports activities.
- **Technologies used:** RESTful APIs, SignalR, .Net Core, UI/UX design
- **Responsibilities:**
  - Developed a sports coordination platform with real-time features using SignalR and RESTful APIs.
  - Implemented user authentication (email, phone, Google OAuth) with secure token management.
  - Built a match discovery system with geolocation filtering and dynamic join/leave functionality.
  - Integrated Firebase Cloud Messaging for push notifications about matches, messages, and team invitations.
